Testing Guide

Testing Guide

Run tests from `06Code` :

```
npm install
npm test
```

Current automated coverage:

- Auth/session: login, logout, invalid Google token, expired session, private page redirect/no-store and valid private dashboard access.
- RBAC: invalid role cannot access consolidated reports.
- Rules: scholarship threshold, promotion candidate rule, teacher payment calculation.
- Academic integration: enrollment request, duplicate attendance rejection, absence review, scholarship evaluation, level promotion evaluation.

Expected result:

```
Test Suites: 4 passed, 4 total
Tests:      13 passed, 13 total
```

If npm reports `UNABLE_TO_VERIFY_LEAF_SIGNATURE` in a local/corporate Windows environment, configure the local certificate chain or run the install in a trusted shell configuration. Do not disable TLS verification in production.
