API Validation Report

## API Validation Report

Generated: 2026-07-02T20:36:13.633Z

Scope:

- Local Express application with in-memory repositories.
- Mock Google ID tokens enabled only for automated validation.
- Session cookie, JWT Bearer token, RBAC middleware, validation middleware, CRUD flows, attendance flows, reports and private page guard are exercised through HTTP requests.

Summary:

- Total cases: 97
- Passed: 97
- Failed: 0
- Sample enrollment request id: 18252bab-e3f8-426b-b412-00d1a5e59543
- Sample attendance record id: de94ca14-a5b5-44b4-b509-5b5512a51f78

| Case                                         | Method | URI                 |
|----------------------------------------------|--------|---------------------|
| Auth config exposes Google client id         | GET    | /api/v1/auth/config |
| Malformed Google token is rejected           | POST   | /api/v1/auth/google |
| Logout without an active session is harmless | POST   | /api/v1/auth/logout |

| Case                                                                                     | Method | URI                                                     |
|------------------------------------------------------------------------------------------|--------|---------------------------------------------------------|
| Private dashboard redirects anonymous users to login                                     | GET    | /private/dashboard.html                                 |
| Login page is served publicly                                                            | GET    | /login.html                                             |
| Anonymous request blocked: GET /api/v1/auth/me                                           | GET    | /api/v1/auth/me                                         |
| Anonymous request blocked: GET /api/v1/enrollment-requests                               | GET    | /api/v1/enrollment-requests                             |
