Postman JWT Authentication Evidence

Generated: 2026-07-02T20:35:37.637Z

Scope

This evidence was generated by running the repository Postman collection with Newman against a local Express server in test mode. The run uses a mock Google ID token for the seeded Admin user and validates the same Postman flow required for manual testing: login, JWT session token capture, Bearer-authenticated request, logout and rejected access after logout.

Target

- Site URL: `http://127.0.0.1:4010`
- Base URL: `http://127.0.0.1:4010/api/v1`
- Runtime: `NODE_ENV=test` , `DB_DRIVER=memory`
- Google token mode: mock Google ID token for existing Admin user

Summary

Metric	Total	Failed
Requests	64	0
Assertions	71	0
Test scripts	64	0

Authentication Checks

Request	Assertion	Result
Google Login - Real Token	JWT session token returned	Pass
Google Login - Real Token	Bearer token type returned	Pass
Google Login - Real Token	Session cookie issued	Pass
Current Session - Bearer Token	HTTP 200 with bearer token	Pass
Current Session - After Logout	HTTP 401 after logout	Pass

Failures

Request	Assertion	Error
None	None	None
